

Final Project Grading Rubric

The final project from this course will focus on a case study of your own design. Students will select an area of interest and then identify a “problem” within that area. The final deliverable will include a write-up report which will identify 1) your role and what sector you represent; 2) the problem you hope to solve; 3) key decisions and stakeholders involved; 4) an ethical matrix; 5) data access, selection, curation, and privacy; 6) what governance structures it will operate within.

Scoring Criteria	Total Points	Score
Full Report (Instructor Review)		
Problem is clearly identified. The solution is persuasive and would likely achieve its goals.	15	
Background information on the case study is provided (e.g. if you are trying to solve a problem in the financial sector, additional sources should be referenced within that sector pertaining to that problem).	15	
Critical thinking – How will you select your data, receive data access, and maintain privacy? Will the data need cleaning/curation? What are the potential hurdles you might face?	15	
Ethical Matrix – Key stakeholders have been identified and ethical dilemmas at each phase of the design cycle have been considered.	15	
Governance – how will this tool be regulated and managed? What are the tools needed to test for Fairness? Will decisions be transparent? Is scalability feasible/desirable?	15	
Total Points for Report	75	

150 Word Summary (For Peers)	10	
Five Minute Presentation (Posted for Peer Review to Canvas)		
Information is presented in a logical sequence. Visual aids are well prepared, effective, and not distracting.	5	
Problem and Solution are clearly articulated	5	
Ethical frameworks have been considered and well articulated	5	
Total for 5 minute video	15	
Total Points	100
